

Amgen teach course helped me to explore a new way of teaching science, and this way fits perfectly with my teaching style. I think that the most important thing that high school science teachers have to do, is passionate their pupils, keep their attention and show them how is beautiful the Nature. When you have their attention you can prove that Science is everywhere.

After the AMGEN teach course I realized that I organize my lesson in a different way now, I introduce a problem to my students then we have a short brainstorming about the topic to collect their ideas and from this activity I introduce the topics of my lesson and I reorganize lessons adapting to students needs and providing many examples.

An added value of AMGEN teach course was being part of a community, this is very important for a teacher, because teaching is a strange work, you spend a lot of time at school but it is difficult to have opportunity to compare your idea with other pairs. For this reason to be part of a community is an opportunity to improve your ideas and knowledge. Amgen Teach community has an added value, strongly motivated teacher composes it and it is a pleasure to be part of this movement and share ideas and new teaching activity.

The AMGEN Teach course for me was the beginning of a great adventure that allows me to discovery a lot of opportunity for career development and participate in European project.

Teresita Gravina, lower secondary school teacher, AMGEN Teach nucleus, Naples ITALY
