Open Schools for Open Societies

This publication has been funded with support from the European Commission under the Grant Agreement Number 741572

The Open Schools for Open Societies project (OSOS) provides innovative ways to explore the world: not simply to automate processes but to inspire, to engage and to connect. It will also support the development of innovative and creative projects and other educational activities.

An open school is a more engaging environment for learning and makes a vital contribution to the community: student projects meet real needs in the community outside school and draw upon local expertise and experience. And finally: learning in and together with the real world creates more meaning and more motivation for learners and teachers.

Schools will be supported to make vital contributions to their communities, student projects will meet real needs, they will be presented publicly, and draw upon local expertise and experience.

The school environment will foster collaboration, mentoring, and will provide opportunities for learners to understand and interrogate their place in the world

The Open Schools for Open Societies project will support your school to implement Open Schooling approaches with:

Inspiring projects that schools can implement to become open communities of learning.

The OSOS model that enables schools to become Open Schools and redefine their role in their communities

The OSOS community of 1000 Open Schools

Inspiring projects

The OSOS inspiring projects are examples of Open Schools. Each project will act as an accelerator for the introduction of the Open School approach in the participating schools. They will help innovative schools to proceed more and develop their innovative ideas to new localised projects that could provide new solutions for the school and its community.

The OSOS model

The OSOS Open Schooling Model provides a powerful framework for school leaders to engage, discuss and explore how their schools need to evolve, transform and reinvent; how schools will facilitate open, more effective and efficient co-design, co-creation, and use of educational content (both from formal and informal providers), tools and services for personalized science learning and teaching; how schools can become innovation incubators and accelerators.

1000 Schools

The OSOS project will allow and guide teachers to participate in our communities. These communities will be based on the activities and the content that each community implements, uses and publishes and allows teachers to organize their groups or classrooms in terms of students and content, learning scenarios and tools.
